Important Announcement
Regarding SAT Test

Dear SAT Students

According to the announcement from the government, any school in Thailand that would like to use their school premises during the current outbreak of COVID-19 under the “Sandbox: Safety Zone in School” protocol must require all teachers, staff, and students to take an Antigen Test at their residence before they enter any SAT Testing Center – school premises. If the students cannot present the ATK test results to the SAT Testing Center, then they will not be allowed to enter the school premises and take the SAT Test on May 7, 2022.

Furthermore, the Ministry of Education and the Public Health Center has also requested that all students after completing their SAT test must take an Antigen Test one more time on the seventh day after their SAT testing date. Therefore, students need to send the follow up ATK test results back to their SAT Testing Center on May 14, 2022. This requirement has been announced by the government even though it has not been required from the College Board. We humbly request your support to comply with this requirement.

Please send your ATK follow up Test result to Mrs. Patchara Tankoonsombut by taking a picture of your ATK result next to your ID card, then send it to the following email: patchara.t@bcis.ac.th

Kind Regards,
Mr. Mark Chen
BCIS SAT Test Center Coordinator
